

AI at Work: Activity Sheet

Eight practical activities across the four workshop topics. Use approved AI tools only, and do not enter confidential or personal information into an unapproved system.

HOW TO USE THIS SHEET

Complete the exercises with a real but non-sensitive work task or with the scenarios provided. Capture decisions and checks, not confidential source material. Activities can be done individually or in pairs.

Activity map

- 01 · Find a task worth improving (01)
- 02 · Audit an AI answer (01)
- 03 · Build a structured prompt (02)
- 04 · Make an executive-ready brief (02)
- 05 · Map a meeting follow-up workflow (03)
- 06 · Prototype a reusable document workflow (03)
- 07 · Do a data-sensitivity check (04)
- 08 · Set guardrails for a decision-support draft (04)

Activity 01 | Find a task worth improving

Time: 12 minutes · Work individually or in pairs

Purpose

Choose a real work task where AI can help without handing over an important judgment.

Instructions

1. List three recurring tasks from your week. Include how often each happens, how long it takes, and what makes it difficult.
2. Score each task from 1 to 5 for repeatability, clarity of inputs, and ease of checking the result. Score risk from 1 to 5, where 5 is high risk.
3. Choose one task with clear inputs, a checkable output, and manageable risk. Describe how AI would assist and what stays human-owned.

YOUR DELIVERABLE

A one-sentence use case and a measurable success test (for example, reduce first-draft time by 20% without increasing corrections).

Work notes

Task and frequency	
Current effort or friction	
Inputs and desired output	
Risk / consequence if wrong	
AI assist vs. human-owned step	
Success measure	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 02 | Audit an AI answer

Time: 15 minutes · Work individually or in pairs

Purpose

Practice separating a useful draft from a trustworthy, decision-ready answer.

Instructions

1. Ask an approved AI tool to summarize a short, non-sensitive work document or create a draft from a brief you provide.
2. Mark each specific claim as supported by the source, an interpretation, or unsupported. Check names, dates, numbers, and any quotation.
3. Rewrite the output so supported facts are clear, assumptions are labeled, and missing evidence is called out. Decide whether it is safe to share.

YOUR DELIVERABLE

A corrected summary plus at least two checks you performed before relying on it.

Work notes

Source or task used	
Claim to verify	
Evidence / source checked	
Correction or uncertainty	
Would you share it? Why?	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 03 | Build a structured prompt

Time: 15 minutes · Work individually or in pairs

Purpose

Translate a vague request into instructions that produce a usable first draft.

Instructions

1. Choose a routine task such as drafting a project update, preparing an agenda, or summarizing a public article. Do not include confidential information.
2. Write a prompt with role, task, audience/context, output format, constraints, and a check for assumptions or uncertainty.
3. Run it once. Compare the result with your intended use, then revise one prompt element and run it again.

YOUR DELIVERABLE

A reusable prompt and one note describing how the revision improved the output.

Work notes

Original task	
Role and task	
Audience / context	
Format and constraints	
What should be flagged or checked?	
Revision and observed difference	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 04 | Make an executive-ready brief

Time: 18 minutes · Work individually or in pairs

Purpose

Use structured prompting to turn source material into a concise, audience-aware communication.

Instructions

1. Use a short, non-sensitive project update, meeting notes, or a public text. Identify the audience and the decision or action they need to take.
2. Ask the AI to produce a brief with: key message, three evidence-based points, risks or unknowns, and a clear next step. Specify a word limit and tone.
3. Trace each factual statement back to the source. Remove unsupported claims and revise anything that obscures the decision.

YOUR DELIVERABLE

A brief that fits the audience and word limit, with unsupported claims removed or marked for checking.

Work notes

Audience and needed action	
Source material	
Word limit / tone	
Unsupported or missing claims	
Final next step	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 05 | Map a meeting follow-up workflow

Time: 18 minutes · Work individually or in pairs

Purpose

Design a repeatable AI-assisted workflow while keeping review and approval visible.

Instructions

- 1. Map how meeting notes become a useful follow-up today: trigger, source, cleanup, summary, action items, review, distribution, and storage.
- 2. Mark the steps AI could assist with, such as grouping topics or drafting action items. Specify the required input and expected output at each step.
- 3. Add a human checkpoint before anything is sent, plus a fallback for unclear owners, missing deadlines, or sensitive information.

YOUR DELIVERABLE

A simple workflow with an owner, approval point, failure path, and one measure of success.

Work notes

Trigger and source	
AI-assisted steps	
Input / output	
Human reviewer and approval	
Failure or exception path	
Measure and baseline	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 06 | Prototype a reusable document workflow

Time: 20 minutes · Work individually or in pairs

Purpose

Turn one repeated document task into a small, testable workflow instead of automating everything at once.

Instructions

1. Select a low-risk, repeated task: for example, turning a public announcement into a team summary or formatting recurring status updates.
2. Define a standard input template, the AI transformation, output format, and a short acceptance checklist. Include how missing inputs should be handled.
3. Test the workflow with two different sample inputs. Record where the output needs correction and update the template or check accordingly.

YOUR DELIVERABLE

A documented mini-workflow, acceptance checklist, and one limitation discovered in testing.

Work notes

Task and boundary	
Standard input fields	
Transformation prompt	
Expected output	
Acceptance checklist	
Test 1 / test 2 corrections	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 07 | Do a data-sensitivity check

Time: 12 minutes · Work individually or in pairs

Purpose

Recognize when work context or personal information must not be pasted into an AI tool.

Instructions

- 1. Consider this scenario: you want an AI tool to summarize customer feedback that includes names, email addresses, account details, and complaints.
- 2. Identify sensitive or identifying fields. Check the organization’s approved-tool and data-handling rules; do not enter real customer records during this exercise.
- 3. Design a safer route: use an approved environment, remove or aggregate identifiers where permitted, limit the input, and retain a human review step.

YOUR DELIVERABLE

A go / no-go decision with the data risks, policy check, and safer alternative recorded.

Work notes

What data is present?	
Who could be identified or affected?	
Which policy / tool must be checked?	
Minimum safe input	
Approval / review needed	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?

Activity 08 | Set guardrails for a decision-support draft

Time: 18 minutes · Work individually or in pairs

Purpose

Keep human accountability and appropriate safeguards in place when AI output may affect people.

Instructions

- 1. Scenario: a manager asks AI to rank employees for promotion using performance notes. Decide whether this is an appropriate task for an ordinary AI assistant and explain why.
- 2. Identify risks such as sensitive data exposure, biased or incomplete records, hidden criteria, and false confidence. Name who is accountable for the decision.
- 3. Redesign the use, if appropriate, as a lower-risk support task (for example, checking a transparent set of role criteria for completeness) with approved tools, documented evidence, and human review. Otherwise, stop and escalate.

YOUR DELIVERABLE

A documented stop / redesign decision, a list of safeguards, and the human decision owner.

Work notes

Potential impact on people	
Risks and missing context	
Allowed support task (if any)	
Safeguards / evidence	
Decision owner and escalation route	

Reflection

What would you change before using this approach in your real work? What should remain a human responsibility?
